**COURSE OBJECTIVE:** To explore the use of the micro computer in solving problems utilizing spreadsheet and databases in the Windows environment. Utilizing the spreadsheet environment of EXCEL we will solve problems using what if analysis and Goal Seeking. To automate tasks in EXCEL the visual basic command recorder will be used to create macros. We will look at the database capabilities of EXCEL. Continuing with more database functions we will explore the use of Microsoft ACCESS to build a database, create an input form, develop SQL (Structured Query Language) to find specific information and finally create the necessary reporting. POWER POINT presentation and WWW software will be the final applications covered to look at the building and integrating of presentations. It is expected that a complete working knowledge of the Windows Operating system (98, ME, NT, XP or 2000) as well as the basic fundamentals of building a spreadsheet and database have been mastered as a pre requisite to this course.

**HOMEWORK:** All homework is due on the dates as assigned and is worth 15 points each. Homework turned in late will have *1 point deducted for each day it is late*. If you know that you will have a conflict in turning homework in on time, it is *your responsibility* to clear it with the instructor so late points will not be deducted. *All students are expected to adhere to the college policy on academic honesty as outlined in the Student Handbook accessible on the Moravian Web Page.* In particular, you must *do your own work* for anything to be handed in and graded. It is O.K. to ask/work with other people in the lab, however, you must type your own solution to each problem/exercise.

**TEXT BOOKS:**
