Math 192.2 A History of Infinity

Tuesday, 2:20-4:00 in PPHAC 233

Instructor: Fred Schultheis
Office: PPHAC 218
Telephone: 610-625-7887
Email: schultheis@math.moravian.edu
Office hours: MTW 1:00 - 2:00 and I am always available by appointment

Textbooks:

1. Infinity: The Quest to Think the Unthinkable, Brian Clegg
2. Zero: The Biography of a Dangerous Idea, Charles Seife

Course Content

Human beings have always struggled with the concept of infinity. Philosophers and mathematicians have gone mad contemplating its nature and complexity -- and yet it is a concept now routinely used by school children. We will trace the history of this mind-boggling concept from Archimedes to Cantor through the eyes of the mathematician. The main content of the course is contained in the books by Clegg and Seife.

Course Goals

Through investigating the development of the mathematical concept of infinity students should develop an appreciation for the beauty and utility of mathematics and its historical development. Consequently, students should gain some insight into what mathematics is really all about and what it is that mathematicians do.

Assignments

Mathematics can only be understood by consistent study and problem solving. For this reason, daily reading and problem assignments will be given and you are expected to have these assignments completed for the next class. You will be called on to give solutions in class, and also are expected to participate in class discussions and ask questions about what you did not understand.

Quizzes and Exams

There will be a short quiz or writing assignment each Tuesday. The quizzes will include questions on the reading assignments as well as problems similar to the exercises assigned for homework. There will be one or two class-hour exams and a final exam.

Grading

Course grade will be based on quizzes and writing assignments (100 points total), in-class exams (100 points each), final exam (at most one third of your total grade) and class participation 50 points.
**Attendance**
Class attendance is required. You are responsible for all work covered in class and all assignments, even if absent from class. If you must miss more than one class due to illness or emergency, you should notify the instructor. In-class exams must be taken at the announced time; make-up exams will be given only in case of extreme emergency or serious illness. There will be no make-up quizzes.

The following **Academic Honesty Policy Guidelines** are to be followed. Please read them carefully.

**ACADEMIC HONESTY POLICY GUIDELINES**

**MATHEMATICS COURSES**

The Mathematics and Computer Science Department supports and is governed by the *Academic Honesty Policy of Moravian College* as stated in the Moravian College Student Handbook (pp. 54-59). The following statements will help clarify the policies of members of the Mathematics faculty.

In all homework assignments which are to be graded, you may use your class notes and any books or library sources. When you use the ideas or thoughts of others, however, you must acknowledge the source. For graded homework assignments, you may not use a solution manual or the help, orally or in written form, of an individual other than your instructor. If you receive help from anyone other than your instructor or if you fail to reference your sources you will be violating the *Academic Honesty Policy of Moravian College*. For homework which is not to be graded, if you choose, you may work with your fellow students. You are responsible for understanding and being able to explain the solution of all assigned problems, both graded and ungraded.

All in-class or take-home tests and quizzes are to be completed by you alone without the aid of books, study sheets, or formula sheets unless specifically allowed by your instructor for a particular test.
